What is Error ?

- **Also known as bugs, are mistakes or faults in a program that cause it to behave unexpectedly.**

Types of Error

Error

Compile time Error

- **Compile time errors are the most common errors that occur due to typing mistakes or not following the proper syntax of the programming language**

Run time Error

- **Errors which occur during program execution (run-time) after successful compilation are called run-time errors. One of the most common run-time error is division by zero also known as Division error.**

Logical Error

- **Logical errors are bugs that cause a program to operate incorrectly but not to terminate abnormally. They produce undesired output or other behavior, although they may not immediately be recognized as such.**
